PUMP		
Liquid Handled	Type of liquid	Clean water
	Max temperature [°C]	45
Maximum working pressure [MPa]		0.6
Maximum suction depth [m]		8
Construction	Impeller	Closed centrifugal type
	Shaft seal type	Mechanical seal
	Bearing	Sealed ball bearing
Pipe Connection	Suction [inch]	G 1 UNI ISO 228
	Discharge [inch]	G 1 UNI ISO 228
Material	Casing	AISI 304
	Impeller	PPO mod. Glass fibre reinforced
	Casing cover	AISI 304
	Shaft seal	Ceramic/Carbon/NBR
	Shaft	AISI 303 (Wet extension)
	Ejector	PPO mod. glass fibre reinforced
	Bracket	AISI 304
	Diffuser	PPO mod. glass fibre reinforced
Applicable standard of test		ISO 9906:2012 – Grade 3B

MOTOR		
Type	Electric – TEFC	
	Single Phase	Three Phase
No. of Poles	2	
Rotation speed [min ⁻¹]	≈ 3000	
Insulation Class	Class F	
Protection degree (CEI EN 60034-5)	IP 44	
	IP 55 (on request)	
Power rating	0.37 ÷ 0.6	
	0.5 ÷ 0.8	
Frequency	50	
Voltage	230 ±10%	230/400 ±10%
Capacitor	Built in	-
Over load protection	Built in	Provided by the user
Casing material	AISI 304	
Motor support	AISI 304	
Dimensions of cable entry	PG 11	

CENTRIFUGAL PUMPS SELECTION CHART

TYPE KEY

PERFORMANCE CURVE SPECIFICATIONS

The specifications below qualify the curves shown on the following pages.

Tolerances according to ISO 9906:2012 – Grade 3B

The curves refer to effective speed of asynchronous motors at 50 Hz, 2 poles.

Measurements were carried out with clean water at 20°C of temperature and with a kinematic viscosity of $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt)

The NPSH curve is an average curve obtained in the same conditions of performance curves.

The continuous curves indicate the recommended working range. The dotted curve is only a guide.

In order to avoid the risk of over-heating, the pumps should not be used at a flow rate below 10% of best efficiency point.

Symbols explanation:

Q = volume flow rate

H = total head

JES 5 (0.37 kW) Impeller diameter = 104 mm

Rotation speed $\approx 3000 \text{ min}^{-1}$
Test Standard: ISO 9906:2012 – Grade 3B
Temperature of water: 20°C

JES 6 (0.44 kW) Impeller diameter = 104 mm

Rotation speed $\approx 3000 \text{ min}^{-1}$
 Test standard: ISO 9906:2012 – Grade 3B
 Temperature of water: 20°C

JES 8 (0.6 kW) Impeller diameter = 110 mm

Rotation speed $\approx 3000 \text{ min}^{-1}$
Test standard: ISO 9906:2012 – Grade 3B
Temperature of water: 20°C

If you use this pump on suction condition, it tends to breath the air from outside because the pressure in pump becomes vacuum condition when it stopped.

So water in the pump sometimes fall down to breath the air from pipe connection.

If it is used to operate continuously under this condition, this is the cause of breakdown to overheat inside the pump.

So please install foot valve or check valve at suction pipe in order to prevent the pump from such a condition. And moreover will you please support the suction pipe and the delivery one to prevent the pump from leaning the weight of pipe.
